**Ag Challenge
Certificate in Carpentry**

- Level 4

Construction work your thing?

NATIONAL CERTIFICATE IN BUILDING CONSTRUCTION AND ALLIED TRADE SKILLS (BCATS)

Level 1 and 2

This programme focuses on home maintenance projects and house building. The Carpentry workshop is well-equipped for tutor supervised projects and practical learning. The students are onsite 5 days a week, either in supervised projects i.e. house building, fencing, retaining walls etc, or placed with local builders on work experience.

The theory component is delivered 2 days a week

- Sample Unit Standards and projects
- Building calculations
- Concrete work
- Residential fences and decks
- House framing

This course pathways onto the Ag Challenge Certificate or allows graduates to gain employment in the Building Construction or Allied Trade Industries.

AG CHALLENGE is one of Whanganui's leading Carpentry training providers.

Working closely with Whanganui's builders and their apprentices is a primary focus for the Ag Challenge trade training programme. When a builder signs a person into a building apprenticeship, there is a requirement for them to complete theory as well as practical aspects, this can take a long time if they're trying to fit the theory around working a 40-hour week. But they can study at Ag Challenge for 12 months and gain their theory before undertaking the practical part with their workplace sponsor, thus fast-tracking the training process for the apprentice and the employer.

Carpentry students at the No. 3 Line work site are given both classroom and practical experience. Under the watchful eye of our qualified tutors the students construct re-locatable buildings to lock-up stage. These are moved to various locations throughout the North Island.

AG CHALLENGE CERTIFICATE IN CARPENTRY

Level 4

The Ag Challenge Certificate in Carpentry is a comprehensive course which will enable students to gain all the carpentry theory qualifications that are required to complete the National Certificate in Carpentry Level 4. Valuable practical experience is gained through the construction of real houses or buildings during the course.

Graduates will be able to:

- use carpentry tools and machinery
- read building plans
- apply theoretical knowledge

and be able to work competently upon gaining employment in the construction industry.

Those achieving this certificate will also be able to further their education in an Apprenticeship by completing the National Certificate in Carpentry Level 4 and / or Construction Level 5.

This is a well-recognised qualification, thereby widening and increasing employment options and suitability for employment. Our students are much sort after by employers within the construction industry.
